

# ICT INTRODUCES NEW ENHANCED INTELLIGENT SINGLE-BUS LOAD DISTRIBUTION PANEL

ICT is releasing a new, enhanced version of our single-bus, 12-output, fuse DC distribution panel to its Distribution Series 2 family of intelligent DC distribution panels. This new model replaces the ICT180S-12IRC model.

The 1RU, 180-amp, single-bus, fuse DC distribution panel is designed for 12- and 24-volt DC installations and supports 180 amps peak / 150 amps continuous system current. The DC panel provides 12 fuse-protected outputs – nine ATO-fuse outputs rated to 25 amps each, and three J-CASE-fuse outputs rated to 40 amps each. Included are five digital input contacts for site monitoring sensors, such as door, smoke, and fire alarms.

Enhanced features include a new processor for enhanced security features, including TLS1.2 support, full SNMP control via new MIB files, a user session logout feature, and enhanced network watchdog functionality.

Effective immediately, the new enhanced ICT180SE-12IRC model replaces the previous ICT180S-12IRC model.
