

ICT INTRODUCES NEW 1500-WATT DC POWER MODULE

1500-Watt Power Module

Effective January 9, 2023, ICT is releasing a new, hot-swappable, 1500-watt DC power module to complement its existing 700-watt DC power modules. Available in 48- and 24-volt DC models, the 1500-watt power module is compatible with ICT's Modular Power Series, MPS Ultra, Hybrid Power Series, and Hybrid Ultra DC power systems.

ICT's DC power systems provide a flexible DC power solution for land mobile radio, fixed wireless broadband, and industrial DC power applications. They provide integrated battery management options, along with DC power distribution for distributing DC power to multiple network devices. With integrated Ethernet TCP/IP connectivity, these systems can be remotely monitored and controlled, allowing for full management of DC power conditions.

The new 1500-watt DC power module is hot swappable, and when used in ICT's DC power systems, can provide up to 12 kilowatts of power in a 2U (3.5-inch) power system.

The new 1500-watt DC power module is available for purchase from any of ICT's authorized distributor partners.
