

ICT INTRODUCES NEW DIN-MOUNT 360-WATT POWER SUPPLY AND 6-OUTPUT POWER DISTRIBUTION MODULE

DIN Series Power Supply

DIN Series Power Distribution Unit

ICT is announcing its new 360-watt, DIN-rail DC power supply and DC power distribution unit. The DIN Series power supply with integrated temperature-compensated battery charging and low voltage disconnect provides 360 watts of 48- or 24-volt DC output.

The DIN Series intelligent power distribution unit can distribute DC power to six individual outputs each rated up to 12 amps, supporting GMT fuses rated up to 15 amps. An integrated Ethernet controller provides reporting of output current and status for each individual load, and remote power cycling of each output individually.

By combining the power distribution unit with the 360-watt power supply, remote monitoring and control of battery current and voltage, battery charge current and low voltage disconnect setpoints are available through the Ethernet controller and graphical user interface.

Manufactured in North America by ICT, the new DIN Series products are ideal for small wireless communication sites, outdoor power enclosures, IoT, SCADA, security and surveillance, and industrial DC power applications.
